Kim Wallen is a Samuel Candler Dobbs Professor of Psychology and Behavioral Neuroendocrinology at Emory University and a Research Professor of Psychobiology at the Yerkes National Primate Research Center. He studies the interaction between hormones and social context on the development and expression of sexual and sex-related behavior in nonhuman primates. He uses nonhuman primates because their extended development and complex social structure model important aspects of the human condition and provide insight into the complementary role that social context and biological predispositions play in the development and expression of behavior. Current projects in the laboratory focus on the effects of atypical prenatal hormonal exposure on anatomical neuroendocrine, and behavioral development in male and female rhesus monkeys. All research is performed at the Yerkes Regional Primate Research Center Field Station. Dr. Wallen earned his B.A. in Biology at Antioch College and his Ph.D. in Neuroscience at the University of Wisconsin-Madison. His awards include the NIMH Independent Scientist Research Award and the Sigma XI Albert Levy Faculty Research Award. He is an Associate Editor of *Hormones and Behavior* and has been President of both the Society for Behavioral Neuroendocrinology and the International Academy of Sex Research.
